## Multiple Catch Rodent Traps

Multiple catch traps are able to trap several rodents at a time because they have repeating spring loaded trap doors. These traps are made of heavy duty galvanized wire mesh to withstand the elements. To set the trap simply set the trap near the usual path of the animal and place bait inside the trap to lure your target animal inside. Animals can easily push the trap door up to get in and eat the bait but cannot push the door open after being trapped inside. Model M35H has the same size door opening as model M35 but is equipped with an extra large holding area to catch ten or more animals at a time.

Baiting Suggestion: Peanut Butter with bird seed works great as a bait for most rodents.
